

Report of the President to Legislative Council

10 April 2014

Cat Fact: Sir Isaac Newton invented the following things: the calculus (unless you're a Leibniz fan), the reflecting telescope, and the cat door.

Student Democracy & Constituencies

Judicial Board – They're working away on their cases.

Council – Oh the places we go. I've spent at least 200 hours in council (I don't even want to think about how many that would be with committees too) over my 3 years. It's been a wild ride full of tears, retreats, nights at gerts, late nights (mornings?) in Lev, and a lot of characters. I'm glad that I've gotten to know a lot of you over the one or two years we have spent together on Council and committees. Although if you ask me tomorrow I will say "no," but really I will miss this lovely room and all of the craziness that I have seen happen here over the years.

Faculty Relations – The current project is finishing the photography contract updates for this year and doing the disbursements to faculties accordingly.

PGSS – SQ

Elections SSMU – I'm glad they are looking forward to improving our By-laws for the future. It is important to revise if the By-laws we have are not ideal in practice.

General Assembly – SQ

Governance Document Review – By-law review report was given tonight.

Orientation Week – There was a meet and greet for new and old orientation coordinators hosted by CL&E this week. I felt old...

Handbook – The new content editor has started working. The theme of the handbook for next year is the 50 Years of the Shatner Building. Should be cool!

McGill Governance & Relations

Board of Governors – I had a committee meeting this week, another one next week, and a Board meeting the week after that. Suits on suits. CAMSR will be next week, we got 13 written submissions from members of the community, and the process has been pretty good. The final submission might come this year, or might get pushed to next year because the consultation was so late and the committee needs time to fully take them into consideration.

Senate – CSS was this week. They presented the application process for the Student Services innovation fund, which will be an awesome venue for collaborative projects next year.

Alumni Association – SQ

Student Life Coordinator – SQ

Sustainability

Environment Committee – Most of the work is completed for the year. The Environment Commissioners will be helping me with the sustainability assessment over the next month or two since the Sustainability Coordinator won't be doing it this year, obviously.

Ad-hoc Sustainability – Presentation tonight.

Human Resources & Executive

Student Staff – A lot of new hires, recruitment is ongoing and applications are still open for a lot of jobs. If you want a job or you have friends who want a job, APPLY!!! <3

Permanent Staff – SQ

Executive – SQ

Respectfully Submitted,

Katie Larson
